

The image displays a 10x10 grid of 100 small dot patterns. Each pattern is a unique combination of the 10 digits (0-9), represented by a specific arrangement of dots. The patterns are arranged in a way that visually represents the Cartesian product of the digits, with each row and column containing all 10 digit patterns exactly once. This is a visual representation of the concept of a Cartesian product, where the elements of one set are combined with the elements of another set to form a new set of ordered pairs.
