

The image displays a 10x10 grid of Braille characters, representing the multiplication table for the integers modulo 10. Each row corresponds to a multiplier from 0 to 9, and each column corresponds to a multiplicand from 0 to 9. The Braille characters are arranged in a regular grid, with each character representing the product of the row and column indices. For instance, the first row (multiplier 0) contains ten Braille characters for 0, and the last row (multiplier 9) contains characters for 0 through 90. The grid is composed of black dots on a white background, with the dots forming the Braille characters.
